Epic Description

(Market Problem, Solution and Solution Description)

Writing

Currently, daily work tracking within the team is fragmented across Excel sheets, chats, and emails, leading to inefficiencies, lack of real-time visibility, and increased dependency on manual follow-ups.

Employees often face challenges in recalling and reporting their daily work during stand-ups, while managers spend considerable time consolidating updates from multiple sources.

To address this, we propose a centralized web-based tool that enables structured daily task entry and provides a unified dashboard for managers. This solution ensures standardized reporting, real-time status tracking, and improved transparency across the team.

The tool acts as a single source of truth, benefiting both employees and managers by simplifying reporting, reducing manual effort, and improving overall workflow efficiency.

🎯 **Positioning Statement**

Overview

Writing

The proposed solution aims to streamline daily work tracking and reduce operational overhead for both employees and managers.

Employees will be able to log their daily tasks in a structured and simple format, eliminating the need to recall work during meetings. Managers will gain immediate visibility into team progress through a centralized dashboard.

This shift will significantly reduce time spent during daily stand-ups on status collection and allow more focus on resolving queries, addressing blockers, and improving productivity.

Company's Current Business

Writing

Currently, task tracking is managed through Excel sheets and communication tools, resulting in scattered data, inconsistent reporting formats, and limited visibility.

Employees often need to manually communicate updates, while managers spend time consolidating this information, leading to inefficiencies and delays in decision-making.

Without a structured system, scaling the team will further increase operational complexity, making it difficult to maintain consistency, accountability, and productivity.

Proposed Solutions

- Centralized daily task entry form for employees
- Predefined work categories to standardize reporting
- Date-wise structured dashboard for better tracking
- Real-time task status updates (Not Started, In Progress, Completed)
- Filter functionality for quick data access (by name and date)
- Inline status update capability for managers
- Clean and intuitive UI for non-technical users

📊 **Business Outcome Hypothesis**

Writing

If implemented, this solution is expected to significantly reduce time spent on manual tracking and status collection.

For a team of 10 employees, assuming an average of 10–15 minutes per day spent on tracking and stand-up updates, this translates to approximately 40–50 hours saved per month.

Additionally, employees will benefit from reduced effort in reporting their work, while managers will gain faster access to actionable insights, enabling quicker decision-making and improved team productivity.

⚙️ **Nonfunctional Requirements**

- **Usability:** Simple and intuitive for all users (including non-technical employees)

- **Performance:** Fast and responsive dashboard
- **Reliability:** Consistent availability during working hours
- **Scalability:** Can handle increasing number of users and tasks
- **Maintainability:** Easy to update and enhance
- **Security:** Internal access control

🚀 **MVP Features (Problem Oriented)**

- Ability to log daily tasks in a structured format
- Ability to categorize work using predefined work types
- Ability to view tasks in a centralized dashboard
- Ability to filter tasks by employee name and date
- Ability to update task status by manager
- Ability to view tasks in a clean, date-wise grouped format

🔮 **Post-MVP Features**

- Ability to export reports (Excel/PDF)
- Ability to store data persistently (database/JSON)
- Ability to generate performance analytics
- Ability to track historical trends
- Ability to send notifications/reminders
- Ability to integrate with other internal systems

👥 **Key Benefits**

✅ **For Managers**

- Reduced effort in daily stand-ups
- Less time spent on follow-ups and data collection

- Centralized view of all team activities
- Faster identification of pending tasks and bottlenecks
- More time to focus on resolving queries and decision-making

---

✅ **For Employees**

- No need to recall tasks during stand-ups
- Easy and structured way to log daily work
- Reduced dependency on manual reporting (calls/chats)
- Clear visibility of their own tasks and progress
- Less repetitive communication with managers

💯 **FINAL IMPACT LINE (USE THIS 🔥)**

👉 Tu bol:

👉 **"This solution reduces effort for both employees and managers by centralizing task tracking, eliminating manual follow-ups, and allowing teams to focus more on execution rather than reporting."**
